MAHMOUD AYMAN FAROUK

Senior DevOps / Platform Engineer

I build reliable systems and enjoy the engineering behind them. I'm a hands-on DevOps/Platform engineer who values automation, reliability, and the craft of building well-designed services that are maintainable and pleasant to operate. I write infrastructure and runtime code—including services and tooling in Go—so I can transform ideas from prototype to production. I love solving problems, tinkering with Linux internals, designing CI/CD and operator-driven automation, and sharing improvements with the community.

LANGUAGES

Arabic [Native]

English [Fluent]

German [Advanced]

CERTIFICATIONS

Associate Cloud Engineer
Google Cloud [Feb 2026 – Feb 2029]

Certified Solutions Architect
AWS [Sep 2026 – Sep 2029]

EDUCATION

B.Sc. Computer Science
Alexandria University [09/2019 – 06/2023]

Grade: Good

Linux & DevOps Engineer Training
ITI [07/2022 – 08/2022]

Grade: Excellent

TECHSTACK

EXPERIENCE

SENIOR DEVOPS ENGINEER

Atos | Cairo, Egypt | 09/2026 – Present

- Lead the Kubernetes platform team, managing cluster lifecycle operations, defining architectural direction, and delegating implementation tasks to cross-functional engineers.
- Led Atos graduate project sponsorship as technical mentor, guiding interns and training transitioning engineers through onboarding technical courses and workflows.
- Designed, implemented, and open-sourced a Kubernetes operator to dynamically set up and scale Azure DevOps pipeline runners, removing CI/CD bottlenecks.
- Designed AI-infrastructure and built an LLM-as-a-Service using LiteLLM, vLLM, and NVIDIA NIM, delivering a scalable AI infrastructure serving over 1.3M requests.

DEVOPS ENGINEER

Atos | Cairo, Egypt | 07/2024 – 08/2026

- Owned the Azure environment end-to-end, taking full responsibility for all cloud infrastructure.
- Selected as the sole engineer requested by the German branch for two separate three-month on-sites in Germany, building team and client trust to deliver critical projects.
- Administered and maintained local and cloud-based Kubernetes clusters, ensuring high availability and optimal performance for ongoing workloads.
- Built and administered diverse cloud environments with Terraform, setting up OpenShift clusters and managing OpenStack and Proxmox infrastructures, scaling for multiple enterprise customers.
- Automated Kubernetes cluster setup and management using PowerShell and Bash, ensuring repeatable setups and reducing manual work.
- Operated and improved monitoring tools (Prometheus, Grafana, ELK, EFK) to provide real-time production analytics.
- Developed custom Prometheus exporters that enabled white-box monitoring, leading to formal SLIs and SLOs to capture operational indicators and drive core reliability practices.

★★★★★ Kubernetes / OpenShift
★★★★★ Terraform
★★★★★ Docker
★★★★★ Linux Internals
★★★★☆ Go (Golang)
★★★★☆ Nix / Nixpkgs
★★★★☆ Ansible
★★★★☆ Prometheus / ELK
★★★★☆ Python / Bash

SKILLS

★★★★★ **Cloud**
Azure, GCP, AWS, OpenStack

★★★★★ **Containerization**
Kubernetes, OpenShift, Docker

★★★★★ **IaC**
Terraform, Ansible, Nix

★★★★★ **CI/CD**
GitHub Actions, Azure DevOps, Jenkins

★★★★☆ **Observability**
Prometheus, ELK, EFK

★★★★☆ **Programming**
Go, Python, Bash, PowerShell

STRENGTHS

Hands-on Mentality
Linux Internals & Tinkering
Automation & SRE Focused
Problem Solving
FOSS Advocate

PROJECTS & OPEN SOURCE

ACP CLOUD PLATFORM

Infrastructure & Deployment Automation

Automated diverse cloud environments using Terraform, establishing highly-available OpenShift clusters and managing complex OpenStack infrastructures tailored for enterprise scale and reliability.

LFP (LEAGUE DE FOOTBALL)

Cloud Infrastructure & CI/CD

Engineered deployment pipelines, infrastructure automation, and robust hosting environments to support the League de Football platform, ensuring high uptime and performance during peak traffic.

MCIT (DIGITAL IDENTITY)

Infrastructure Provisioning

Designed and deployed foundational infrastructure and automated CI/CD workflows for the Ministry's Digital Identity initiative, ensuring secure and resilient service operations.

NIX & NIXPKGS

Open Source Contributor & Maintainer

Long-term reviewer and maintainer in the Nixpkgs ecosystem. Contributed 40+ PRs across various packages and modules, ensuring ecosystem stability, reproducibility fixes, and up-to-date dependencies.

HOBBY PROJECTS

FELUKKA (KOPTAN AND BOSLA)

Author & Maintainer

Developed and maintained open-source tooling centered around the Felukka ecosystem (including Koptan and Bosla). Focused on modernizing workflows and providing extensible tools for the community.

KARA (KUBERNETES AZURE-DEVOPS RUNNER AUTOSCALER)

Author | Go, Kubernetes

Authored an open-source Kubernetes operator to manage on-demand Azure DevOps self-hosted runners as CRDs. Features include lifecycle safety via webhooks, secure PAT handling, and PVC-backed workspaces.
